

## Copilot

To find your Azure Storage AccountKey, you can follow these steps:

### 1. Azure Portal:

- Navigate to the Azure Portal.
- Go to your storage account.
- Under the “Security + networking” section, select “Access keys”.
- Your account access keys will appear, and you can select “Show keys” to display the keys and enable buttons to copy the values<sup>1</sup>.

### 2. Azure PowerShell:

- If you prefer using Azure PowerShell, you can use the `Get-AzStorageAccountKey` cmdlet to retrieve your storage account keys.
- Here’s an example command: `Get-AzStorageAccountKey -ResourceGroupName "YourResourceGroupName" -Name "YourStorageAccountName"`
- Replace “YourResourceGroupName” and “YourStorageAccountName” with your actual resource group name and storage account name<sup>2</sup>.

Remember to keep your account keys confidential as they provide full access to your storage account.
